Project Euler #9: Special Pythagorean triplet

Problem Statement

This problem is a programming version of Problem 9 from projecteuler.net

A Pythagorean triplet is a set of three natural numbers, a < b < c, for which,

$$a^2 + b^2 = c^2$$

For example,
$$3^2 + 4^2 = 9 + 16 = 25 = 5^2$$

Given N, Check if there exists any Pythagorean triplet for which a+b+c=N

Find maximum possible value of abc among all such Pythagorean triplets, If there is no such Pythagorean triplet print -1.

Input Format

The first line contains an integer T i.e. number of test cases.

The next T lines will contain an integer N.

Output Format

Print the value corresponding to each test case in seperate line.

Constraints

1 < T < 3000

 $1 \le N \le 3000$

Sample Input

2

Sample Output

60 -1

12
